

**GRIBA TREE NURSERY**

GROW WITH US.

## Griba Nursery: Where Knowledge Grows

Griba Nursery was founded in 1987. Through many years of experience, the generational exchange and modern cultivation methods, Griba has developed into a renowned company for the production of apple trees.

You can find us here:

## **Griba. The South Tyrolean Quality Tree Nursery.**

South Tyrol is THE apple paradise, as it is one of the largest contiguous fruit-growing areas in Europe. With altitude differences of around 900 meters, various apple varieties can grow. For 40 years we have successfully produced many new and classic varieties. With our extensive knowledge of cultivation, we provide our customers with advice before, during, and after the tree purchase.

[www.griba.it](http://www.griba.it)

# Quality is our standard

The production of Griba nurseries is extremely diversified. We offer a complete range of varieties: from the classics to exclusive 'club' varieties and innovative and pest resistant varieties to meet the different needs of our customers.

Our range currently includes more than 20 varieties that are distributed worldwide. Our priority is always to guarantee the highest quality. For this reason, our seven producers are constantly in the nursery and carry out regular quality controls.

Mutation of Red  
Delicious standard

**Variety Owner:** Griba  
Vivai coop. Soc. agr.

**Description:** Elongated  
with the typical taste  
of Stark Delicious.  
Intense dark red.

## We offer solutions for different culti- vation systems.

The current challenge for every fruit grower is to increase the productivity of their orchard while maintaining high apple quality. New training systems such as bi-axis or multi-axis are increasingly adopted to keep the fruit wall compact and promote apple coloring. We have apple trees suitable for different training forms such as 1-year-old plants, knip or BiBaum®.

# Bibaum®

**Excellent vigor management  
and easy production**

Bibaum® is a plant consisting of two vertical and parallel axes. The distribution of vigor on two axes leads to a narrow wall, which facilitates fruit production and quality. Upon request, Bibaum® plants of different varieties are available. **The Griba Nursery is an official licensee of Bibaum®.**

A compact wall offers better and more uniform coloring and higher yield.

Optimal growth regulation and, in some varieties, a biennial bearing reduction.

Ideal for mechanical pruning.

Better formation of a fruit wall.

**SOME  
ADVANTAGES OF  
THE BIBAUM®  
SYSTEM**

**Red Delicious  
Jeromine  
C.O.V.**

**Origin:**  
Mutation of  
Early Red One®  
Erovan

**Variety Owner:**  
Dalival / IFO

**Description:**  
Deep red, shiny

**SAN-CIV®  
FUCIV51pbr**

**Origin:**

# Club varieties we cultivate

## Nicoter KANZI®

**Description:** Nicoter KANZI® is a natural cross between Gala and Braeburn. This variety remains very crunchy for a longer time and is grown in eleven countries around the world.

**Breeder:** Better3fruit

**Variety Owner:** efc

Griba has the production rights for the Nicoter C.O.V. variety (TM: Kanzi®) in Italy

All information at:  
[kanziapple.com](http://kanziapple.com)

We cultivate also Nicored trees

## Bonita

**Description:** Slightly tart, aromatic, juicy, and crunchy. These are the characteristics of the Bonita apple. The cross between Topaz and Cripps Pink has a bright red color. Particularly appreciated in organic farming.

**Breeder:** Ústav Experimentální BOTANIKY AV ČR

**Variety Owner:** KSB

Griba has the right to produce the Bonita variety.

## UEB6581-Dolce Vita

**Description:** The UEB6581 encompasses all shades of red. The apple is medium-sized with a high brix level and uniform red color.

**Breeder:** Ústav Experimentální BOTANIKY AV ČR

**Variety Owner:** KSB

**Griba has the production rights for the UEB6581 variety.**

## Phosphite-free production

In compliance with various cultivation protocols in fruit growing, we do not use phosphites in our production. Therefore, we produce plants that do not contain phosphite residues at the time of planting.

## Our Nursery-Members

# Not only apple trees...

First-class quality, diverse selection

## Cherries

**Varieties:** Kordia, Regina, Ferrovia

Own cultivation and in collaboration with partners and licensed nurseries.

## Pears

**Varieties:** Williams BC, Max Red Bartlett, Decana Del Comizio, Kaiser Alexander, Santa Maria, Conference, Abate

Own cultivation and in collaboration with partners and licensed nurseries.

## Nectarines

Own cultivation and in collaboration with partners and licensed nurseries.

## Peaches

Own cultivation and in collaboration with partners and licensed nurseries.

With licensed partners, we can offer a wide range of different varieties.

Many more varieties available on request & order

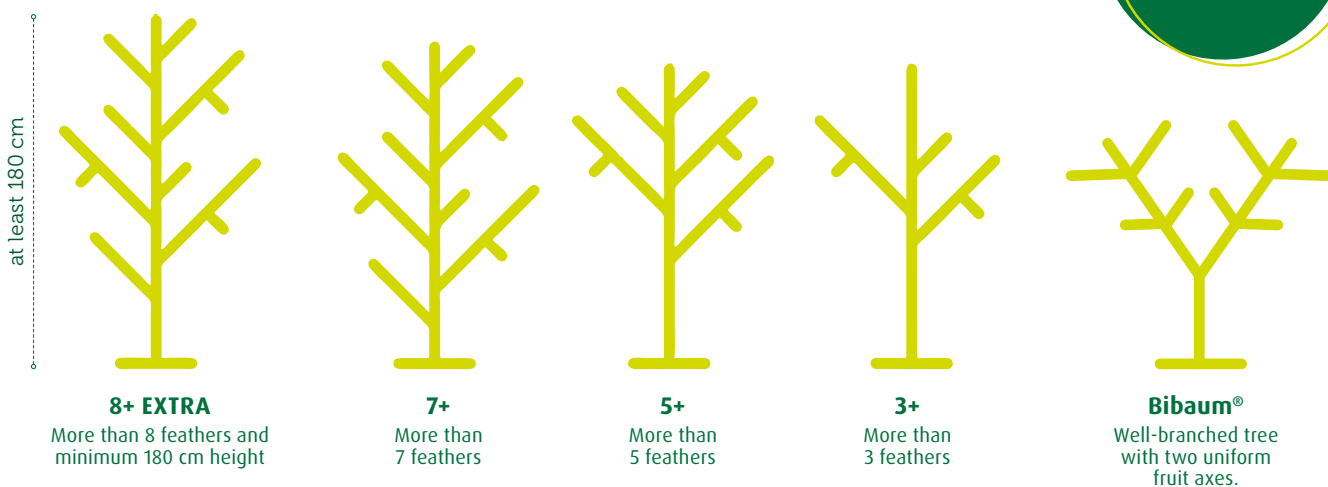

# Our Qualities

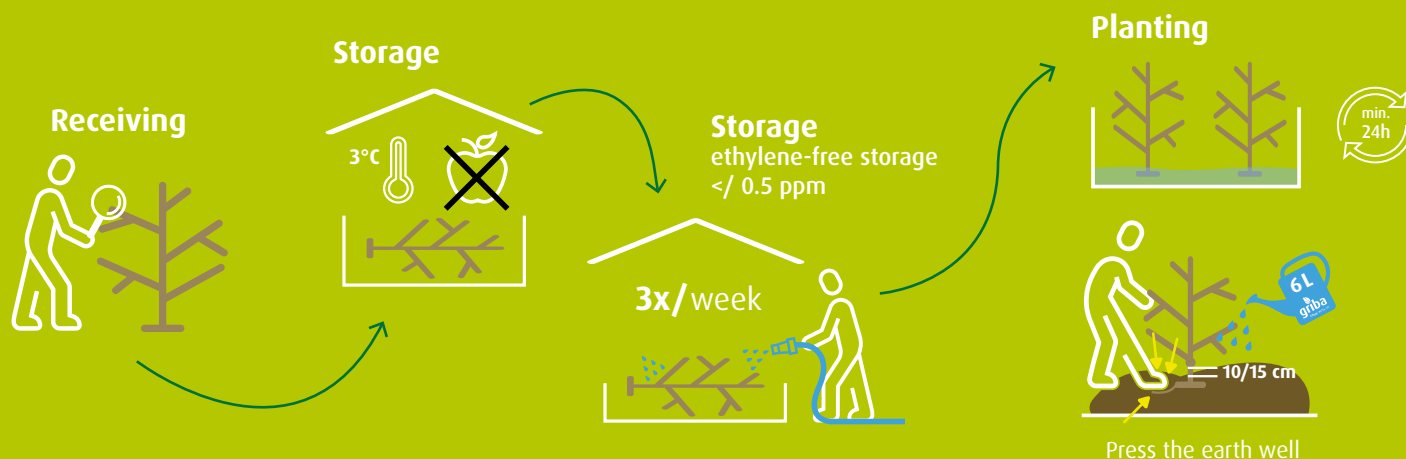

**Our plants are available in various qualities and can be ordered according to your specific requests.**

The quality depends on the number of lateral branches, trunk diameter, and plant height. Our sales team consists of experienced professionals who pay special attention to individual customer needs, thus ensuring personalized and high-quality service.

**Quality Groups:** Depending on the number of anticipated branches, our trees are available in different quality groups.

## Planting and storage

BREEDING & INNOVATION

# Progress is our mission.

**New apple varieties are constantly selected in our breeding program.**

The development of a new variety takes several years. For over 15 years, Griba has managed its own breeding program. Starting from 20,000 seedlings per year, we select the best new varieties presented and developed together with interested partners.

# The Griba Breeding Programm

Some our **new varieties**:

**JULY**

**Early ripening and refreshing,** harvesting time 20 days before Gala

**AUGUST  
GALA**

**Crisp and Scab Resistant,** early-medium harvesting time, 15 days after Gala

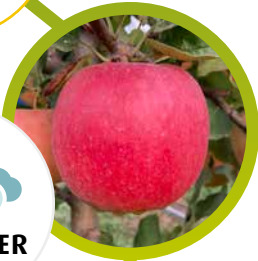

**SEPTEMBER  
GOLDEN**

**Attractive and tasty,** medium harvesting time, 7 days after Golden

**OCTOBER  
FUJI**

**Aromatic and Highly Productive,** late harvesting time, 15 days after Fuji

**NOVEMBER**

We develop **new varieties** with these characteristics

**BALANCED SWEETNESS / ACIDITY**

**CRUNCHINESS AND MODERN TEXTURE**

**GOOD JUICINESS**

**TASTY**

**NICE COLOURING AND APPEARANCE**

**EASY TO STORE**

Nature creates so **many varieties** of apples, it is in our hands to find the best ones.
